linkedin.com/in/kranti-dhanawade-b52623342

B.Tech student in Artificial Intelligence & Data Science with a consistent academic record and hands-on experience building backend architectures, data pipelines, and AI workflows using Python, FastAPI, and Flask. Proficient in backend development, database design, and algorithmic problem-solving. Seeking a backend or AI engineering role to apply practical development skills and grow in a professional environment.

EDUCATION

B.Tech in Artificial Intelligence & Data Science

2023 – 2027

Genba Sopanrao Moze College of Engineering, Pune | SGPA: 9.86, 9.55, 9.50, 9.32, 9.44, 9.57 (Sem 1-6)

TECHNICAL SKILLS

Languages: Python, C++

Frameworks & Libraries: FastAPI, Flask, NumPy, Pandas, Scikit-Learn, Celery, Redis

Databases: PostgreSQL (pgvector), MySQL, SQLite

Web & Tools: Git, GitHub, REST APIs

Concepts: Object-Oriented Programming, Data Structures (Arrays), Algorithms, File Handling

AI Tools: Generative AI workflows, Prompt Engineering, Local LLM Integration, LangGraph

PROJECTS

Cognetix (Enterprise Data Intelligence Pipeline)

- Engineered a multi-agent RAG pipeline using Python, PostgreSQL (pgvector), and LangGraph for secure, hallucination-free querying of proprietary enterprise datasets.
- Developed asynchronous background workers with Celery and Redis to securely chunk, vectorize, and ingest documents into a local database without exposing data to public models.
- Implemented strict Role-Based Access Control (RBAC) and prompt-injection sanitization to maintain data security and pipeline integrity (currently in active testing phase).

Agentic Auto-Pilot (AI Workflow Engine)

- Engineered an autonomous AI workflow engine using Python and Generative AI prompting techniques to automate complex multi-step tasks.
- Developed backend endpoints with FastAPI to perform semantic similarity searches and stream structured LLM outputs.
- Implemented algorithmic logic and error-handling independently to ensure highly reliable API integration.

GitPulse (GitHub Analytics Service)

- Developed a backend analytics service for GitHub profiles using Flask, Flask-SQLAlchemy, and Authlib for secure OAuth authentication.
- Integrated GitHub REST and GraphQL APIs to process user commit logs and repository data, executing periodic automated scheduling for statistical refreshes.
- Designed a relational database schema to calculate and track a weighted composite score for repository health.

TubeGrab (YouTube Media Processing Queue)

- Built a local backend application using Python, Flask, and yt-dlp to process and queue sequential YouTube media downloads.
- Engineered a real-time download queue manager utilizing Server-Sent Events (SSE) to stream live progress updates to the client.

INTERNSHIP

C++ Programming Intern – TechnoHacks

2024 | Remote

- Developed optimized C++ source code architectures modeling multi-dimensional matrix operations and modular engineering setups.
- Refactored underlying algorithmic application modules using standard sorting techniques and core Object-Oriented paradigms.

CERTIFICATIONS

- Object-Oriented Programming Specialization (Coursera / University of London)
- The Complete Python Bootcamp (Udemy)
- PostgreSQL & MySQL for Beginners (Udemy)
- NumPy, SciPy & Pandas A-Z: Machine Learning (Udemy)
